

GAARDBOX® is a safety chest for tools and accessories that can be locked with padlocks.

PÄÄOMINAISUUDET

- The burglar-proof steel chest has a capacity of 449 liters and air holes in its base plate, through which the ingress of moisture can evaporate. The safety chest has holes for cable supply, so the devices can be left to charge in the box even when it is locked.
- The safety chest can be moved using forklift pockets and lifting slings. The chest can be moved and lifted by hand using the handles on the side of the coffin. For easy transportation, a set of wheels is available for the safety chest, which, however, must be removed once the chest has been moved in place to prevent theft. The cover of the safety chest is easy to lift thanks to two gas springs. The steel chest is delivered hot-dip galvanized without painting. Made in Finland.
