

Valmu lighting transformer is the central unit of the 48VAC lighting system. A total of 50 lights can be connected to a safe low voltage network in one 1500 VA transformer. The lights are divided into two circuits, each with its own switch, quick fuse and indicator light. The transformer has a main switch. Thanks to the indicator lights, it is easy to see from the transformer whether power is coming in to the transformer and to both circuits. Lightweight and efficient Valmu transformer can be hung on the wall from the suspension loops. The connection is fast thanks to the spring connectors. Strain relief is done on the transformer bar. Valmu is made in Finland.

TEKNISET TIEDOT

Tuotekoodi	20105005 (20105004)	Weight	13 kg
Power	1500 VA	Supply	230VAC
No. of lighting circuits	2 kpl	Output voltage	48VAC
Lights in total	50 kpl (2 x 25 kpl)
